

Cloud Staffing Professionals is a veteran owned company founded by two industry experts with over 25 years of combined experience. We specialize in placing high end engineers with clients that demand the type of quality and critical needs for their projects. What sets Cloud Staffing apart from other agencies is the type of process that is in place to ensure that you are getting only the best quality out of your consultants.

Consultants are vetted by expert recruiters to make sure that by the time that you see the resume that your job is their number one priority and that they have recent client manager references checked and everything came back great! Quality is what we demand at CSP because that's what you as the client deserve. The consultants that we deal with are industry experts, more often than not former employees of places such as Oracle, SAP, Microsoft and other companies that decided to go the independent consultant route. Whether you need a Cisco engineer for that new deployment or if you need a Cyber Security guru we have a solution for that need. We are also capable of handling your BI needs as well.

### STAFFING SOLUTIONS FOR INFORMATION TECHNOLOGY FROM THE EXPERTS
